Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. – 25. Canceled

26. (Previously Presented) An organic electroluminescent device comprising:
an anode formed of a positive charge carrier injecting material;
a cathode formed of a negative charge carrier injecting material;
a light emissive layer located between the anode and cathode; and
an unpatterned dielectric layer located between the light emissive layer and the anode.

27. (Previously presented) A device as claimed in claim 26, wherein the thickness of the dielectric layer is between 10 and 500Å.

28. (Previously presented) An organic electroluminescent device comprising:
an anode formed of a positive charge carrier injecting material;
a cathode formed of a negative charge carrier injecting material;
a light emissive layer located between the anode and cathode; and
a layer of amorphous silicon located between the light emissive layer and the anode.

29. (Previously presented) A device as claimed in claim 28, wherein the thickness of the amorphous silicon layer is between 10 and 500Å.

30. (Previously presented) An organic electroluminescent device comprising:
an anode formed of a positive charge carrier injecting material;
a cathode formed of a negative charge carrier injecting material;

a light emissive layer located between the anode and cathode; and

located between the light emissive layer and the anode, a layer consisting essentially of a conductive oxide selected from the group consisting of tin oxide, zinc oxide, vanadium oxide, molybdenum oxide and nickel oxide.

31. (Previously presented) A device as claimed in claim 30, wherein the thickness of the conductive oxide layer is between 10 and 500 Å.

32. Canceled
